ABOUT ME.

A strategic communications professional with over 10 years of experience delivering high-impact campaigns and projects across the public, private, and development sectors. Experienced in designing project-focused communications and project management work plans for a diverse client portfolio.

Most recently, took on the role of the project communications consultant for the **Rivers Basin Rehabilitation and Restoration Program: Sewerage Improvement Project Phase II**, tasked with enhancing project visibility and awareness.

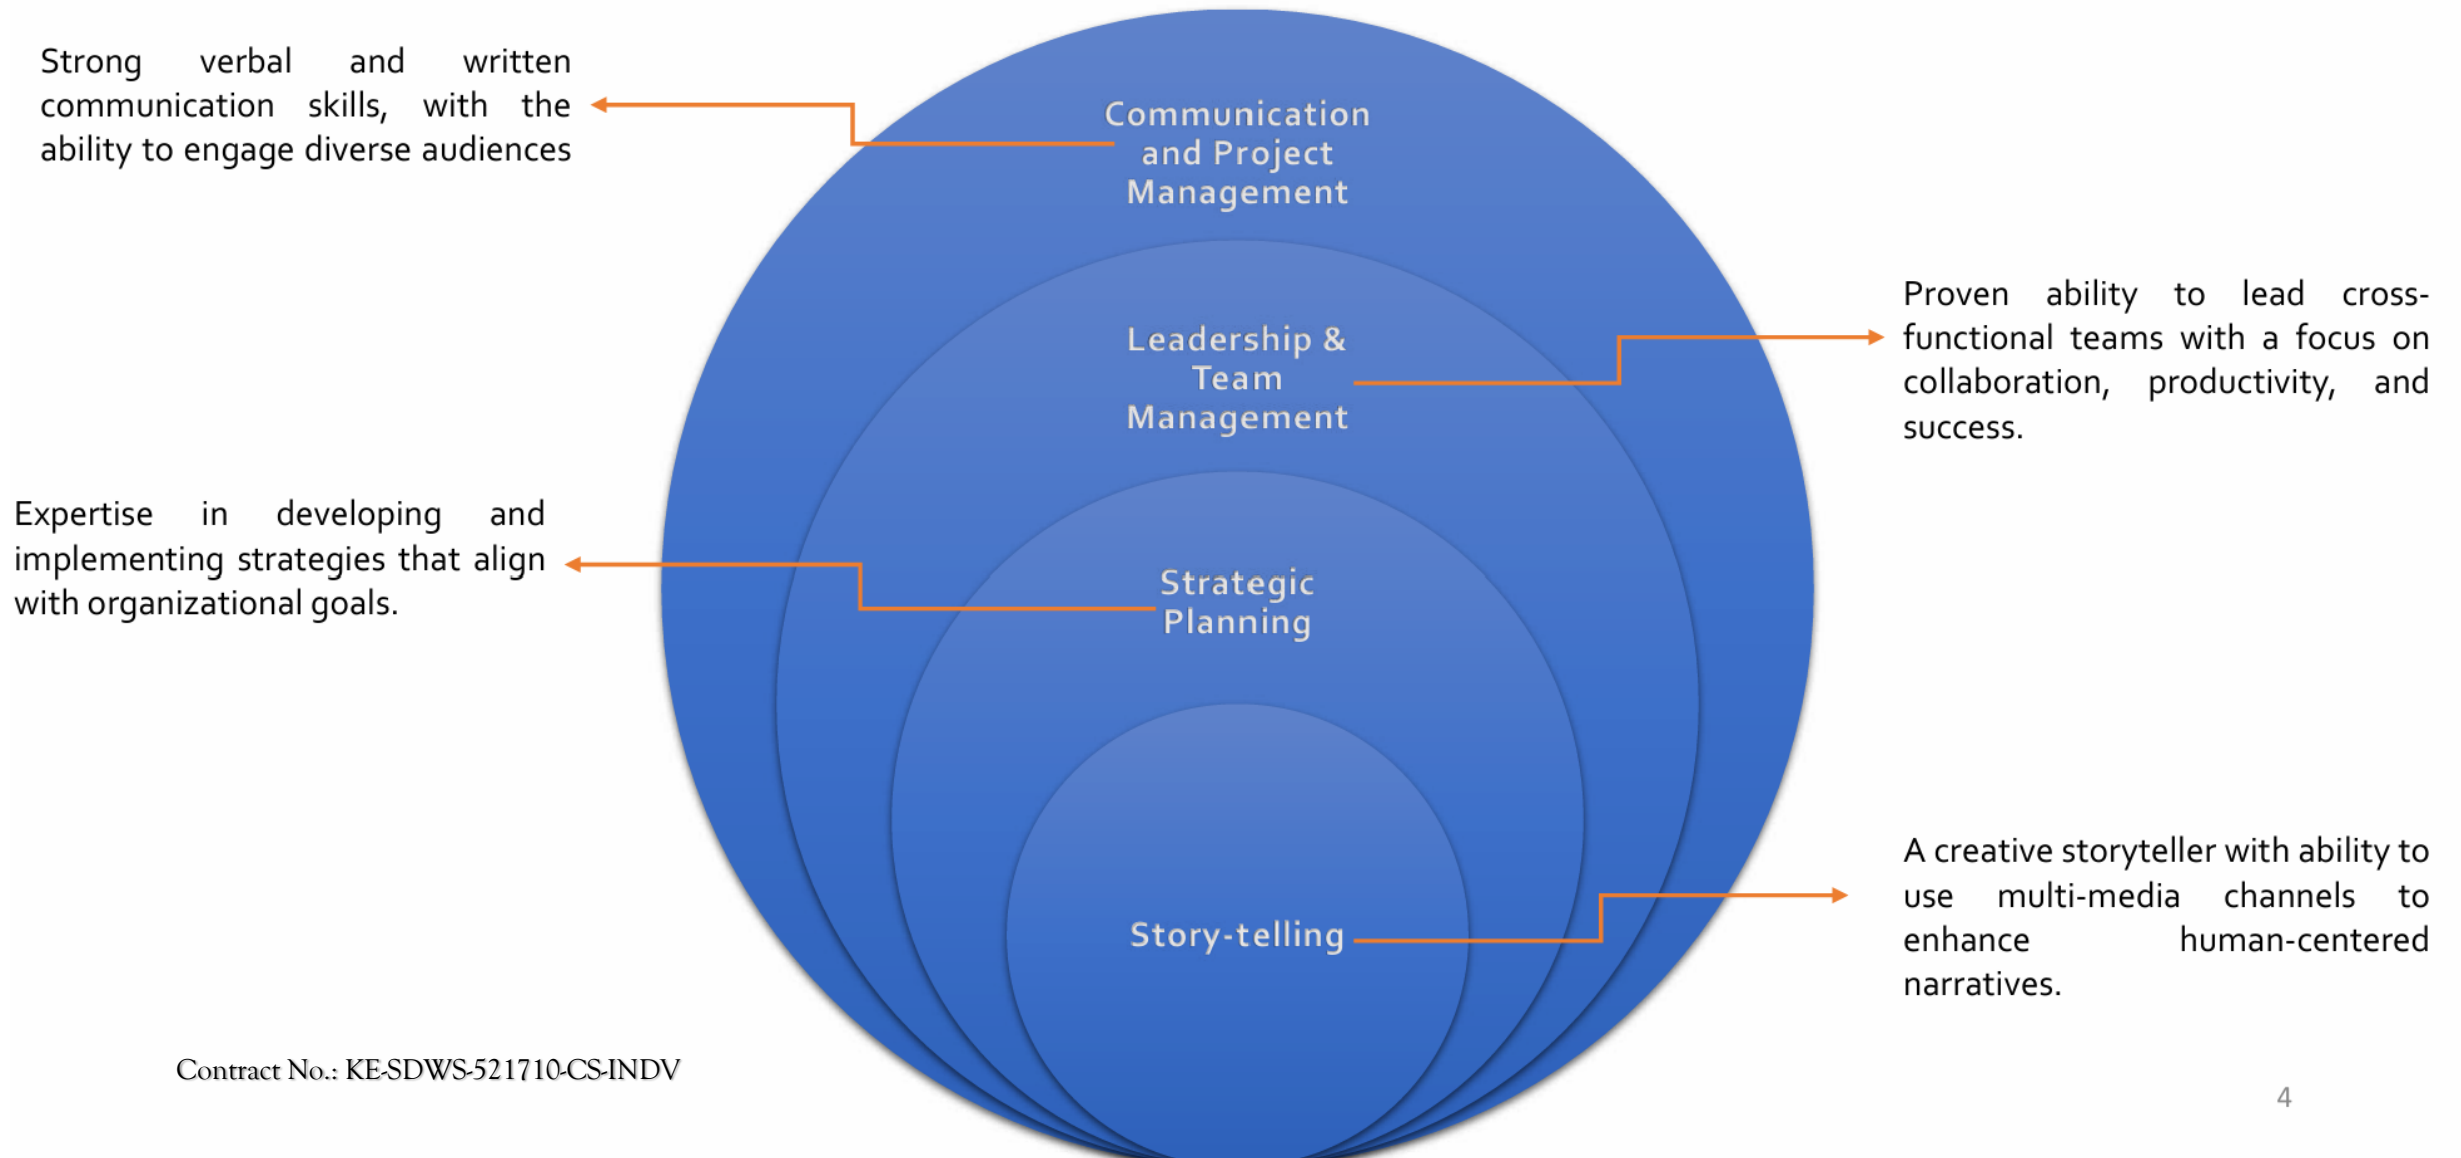

Has led teams of communications professionals across the Global South, fostering collaboration and achieving measurable results in climate, development, and sector-specific communications, including aviation, agriculture, sports, media, health, climate change, and governance.

Developed and executed strategies for high-profile initiatives and clients, including the **African Development Bank (AfDB), KenGen, Beyond Zero Campaign, Magical Kenya, IGAD, StanChart Nairobi Marathon, IAAF, and Africa Water Congress (AfWA)**.

Proficient in media relations, behavior change communications, intergovernmental relations, and development partnerships, with a proven track record of securing extensive media coverage and building strong relationships with leading media outlets.

Adept at coordinating large-scale events and conferences, such as the **Africa Energy Forum, Africa Climate Summit**, and the **3rd IGAD Scientific Conference on Migration and Displacement**, with a focus on helping organizations authentically engage and reach African audiences.

20th September, 2024.

To Whom It May Concern,

RE: POSHIA SYINDU MUSESYA

It is my pleasure to write this recommendation letter for Poshia Syindu Musesya, who currently serves as the Project Communications Consultant for the **Nairobi River Basin Rehabilitation and Rehabilitation Programme Sewerage Improvement Project (NaRSIP II)**. Poshia has played a key role in designing and implementing the project's communications strategy, significantly increasing the visibility and understanding of the project among various stakeholders. As a communications consultant, Poshia is responsible for designing and implementing a comprehensive communications plan that effectively engages local communities, government agencies and environmental groups.

Her ability to break down complex technical information into clear, accessible messages has significantly increased public awareness and support for the project aimed at cleaning and rehabilitating Nairobi's river and sewerage systems. She has demonstrated exceptional media relations skills and ensured that the project's visibility was always well documented in media channels. Her strategic approach and expertise have resulted in a significant increase in public engagement, media coverage and stakeholder involvement.

In addition to her technical skills, she has consistently demonstrated strong leadership skills, creativity and adaptability. She works closely with engineers, environmental experts and local authorities to ensure the project's objectives are clearly communicated while addressing the concerns of affected communities. Her ability to navigate complex stakeholder relationships and foster positive dialogue has been critical to the project's success.

Based on my experience with Poshia Musesya, I can confidently say that she would be a valuable asset to any organization or project in need of a communications professional with both technical expertise and a deep understanding of community engagement, and I would highly recommend her for future communications consulting roles, especially in infrastructure, environmental, or public service projects.

If you require further information, please feel free to contact me at nkibaara@awwda.go.ke or +254 720 870853.

Yours Sincerely,

Nyambura Kibaara,

Director of Communication, Athi Water Works Development Agency.

24th September, 2024

To Whom It May Concern,

RE: SYINDU POSHIA MUSESYA

I am writing to recommend **Syindu Museya** who served as a Communications Consultant for various programmes under the **State Department for Energy in Kenya** from 2022 to 2024. During this time, she proved to be an invaluable asset to our team, bringing expertise, professionalism, and creativity to every aspect of our communication initiatives.

Key among the events she participated in are the Africa Energy Forum (2023), Africa Climate Summit (2023) and the Clean Cooking Week (2023).

In her role, Poshia was responsible for developing and implementing a comprehensive communications strategy aimed at increasing public awareness of Kenya's energy policies, projects, and reforms. This included handling media relations, engaging stakeholders, managing digital content, and ensuring transparent and consistent communication across various platforms. One of her key achievements was the conceptualization and execution of "**Kaa Safe Mtaani**" digital campaign that enhanced awareness on safe use of LPG gas for low income households in Kenya. This campaign reached over 10Million LPG gas users in Kenya.

Syindu has demonstrated a deep understanding of the energy sector and the unique challenges it presents, particularly in communicating complex technical issues to diverse audiences, from government officials to the general public. Her ability to translate technical jargon into accessible, impactful messages significantly improved public understanding of the energy sector. Poshia was also adept at managing high-level stakeholder engagements, ensuring that key

players, such as government bodies, private sector partners, and civil society groups, remained well-informed and involved in key energy sector developments. She was also strategic in working with key Semi-Autonomous Government Agencies (SAGAs) under the Ministry, notably Kenya Electricity Generating Company (KenGen), Kenya Energy Transmission Company (KETRACO), Energy and Petroleum Regulatory Authority (EPRA), Rural Electrification and Renewable Energy Corporation (REREC), and the Geothermal Company (GDC).

In addition to her technical skills, she demonstrated a remarkable ability to work under pressure, managing tight deadlines and multiple projects with ease. Her proactive attitude, attention to detail, and exceptional interpersonal skills made her a trusted advisor not only to the communications team but also to senior leadership within the department.

Based on my experience working with Miss Syindu I am confident that she will bring the same level of dedication, expertise, and innovation to any future projects she undertakes. I highly recommend her for any communications consultancy roles, especially within sectors that require strategic and impactful communication efforts, such as energy, infrastructure, or public policy.

Should you require any further information, please do not hesitate to contact the undersigned.

Yours Sincerely,

Eng. Isaac N. Kiva, MBS

Project: Nairobi Rivers Basin Rehabilitation and Restoration Program; Sewerage Improvement Project Phase II.

Timeline: 2024/2025

Overview and Key responsibilities: I was tasked with leading the development and implementation of the NaRSIP Communication Strategy, aimed at increasing public awareness about the project and enhancing communication between communities and stakeholders. The goal was to highlight the program's impact, promote its services, and build a stronger relationship with beneficiaries.

Key achievements and impact: Increased Engagement: Increased engagement and project awareness on social media channels with post engagements receiving up to 40% engagement from beneficiaries. Led a multi-faceted behaviour change and public awareness campaign reaching over 20 million Kenyans through traditional and digital media channels, including a door-to-door sanitation and hygiene awareness campaign.

Media Coverage: NaRSIP received increased media attention, with more than 15 newspaper and TV articles featuring the program's achievements. Stakeholder Support: The strategy led to greater donor support, as stakeholders were more informed about the program's impact and efficiency.

NaRSIP II: Turning flying toilets into cleaner, safer communities across Nairobi

26-Nov-2025

Drone image of the Dandora Estate Wastewater Treatment Plant in Ruai, Nairobi, whose expansion was funded by the NaRSIP II project.

“Without the African Development Bank, this school would have been closed because of the poor sewerage system that broke down due to flooding from heavy rains in 2024,” Alice Mwangi, the headmistress of Chieko Junior School, in Kasarani, said with a smile during an interview, pointing to the new sewer line infrastructure.

Alice Mwangi, Headmistress of Chieko Junior School, a NaRSIP II beneficiary, describes improvements in school attendance and decrease in illnesses thanks to the construction of modern ablution blocks.

According to Mwangi, the school had just eight toilets shared among 22 teachers and 1,800 students – far too few to meet the needs of the entire school community.

“All the students, big and small, used the same toilets, even sharing with the teachers. When they saw a teacher approaching, they would run away,” said Mwangi.

Previously, the school relied on a septic tank that often overflowed, spreading effluent across the compound. “Learners frequently suffered from stomach aches and diarrhoea,” recalled Mwangi, adding: “Heavy rains only worsened the situation, creating a health hazard, and at times, driving

students to withdraw from school.”

Thanks to the [Nairobi Rivers Sewerage Rehabilitation and Restoration Project - Phase Two](#) (NaRSIP II), funded in the amount of €59.4 million by the African Development Bank and €3.5 million by the African Development Fund, the school is now connected to the main sewer grid, and there is no more overflowing of liquid waste. New toilets have also been constructed, easing overcrowding.

State Involves Private Investors To Address Water Crises

KNA1 May 19, 2023 Counties, Historic Photos, Nairobi, Water

The Ministry of Water, Sanitation, and Irrigation is working with private investors in efforts to increase the storage capacity of water through the construction of 100 large dams across the country.

Cabinet Secretary (CS), Alice Wahome, said that the government is working through the Public Private Partnership (PPP) model in order to mobilize additional resources for investment in the sector.

"Kenya has seven large dams with stored water for electricity production. Another 99 medium non-hydroelectric dams and over 3,000 small dams and water pans are used for domestic and irrigation purposes," she said.

The CS said that the Constitution guarantees Kenyans the right to reasonable standards of sanitation and clean, safe water in adequate quantities, which contributes to adequate food of acceptable quality through irrigation.

According to the CS, the Ministry is seeking ways to implement the water and irrigation services while leveraging different resources, expertise, and technology.

Client: Energy and Petroleum Regulatory Authority (EPRA) Project: Kaa Safe Mtaani Public Awareness

Campaign Duration: 1 month

Campaign Brief and Role: Conceptualization and execution of the “Kaa Safe Mtaani” digital campaign that enhanced awareness on safe use of LPG gas for low-income households in Kenya.

Impact: This campaign reached over 10 Million LPG gas users in Kenya.

Campaign objectives:

- To reduce accidents and incidents that lead to injury, deaths, or loss of property
- To encourage behavioural change
- To educate Kenyans on the dangers of illegal siphoning of fuel
- To educate Kenyans on the dangers of illegal electricity connections
- To educate Kenyans on safety steps when handling petroleum and electrical products

SAMPLES OF WORK DONE

EPRA Launches A One-Month Safety Campaign

👤 KNA3 🕒 November 19, 2022 📁 Counties, Editor Picks, Energy, Nairobi

💬 0

The Energy and Petroleum Regulatory Authority (EPRA) has officially launched their campaign dubbed as *Kaa Safe Mtaani* that will run for a period of one month.

The Campaign is geared towards encouraging behavioral change that is expected to result in reduced accidents and incidents that lead to injury, deaths or loss of property and their initiative aimed at sensitizing Kenyans on dangers of illegal siphoning of fuel from overturned fuel tankers and illegal electricity connections.

Speaking during the official launch, Energy CS Davis Chirchir stated that energy plays a crucial role in the development of the country's economy and all industries should invest in sustainable energy to achieve strategic growth.

"The *Kaa Safe Mtaani* campaign is timely in this environment of increased energy consumption as it demonstrates responsibility from the energy sector to its consumers by promoting safety.

However, the campaign speaks to common *mwanaanchi* by educating them on crucial steps applicable to their daily life that could avert any harm or loss life," he said.

"The *Kaa Safe Mtaani* campaign is timely in this environment of increased energy consumption as it demonstrates responsibility from the energy sector to its consumers by promoting safety.

However, the campaign speaks to common *mwanaanchi* by educating them on crucial steps applicable to their daily life that could avert any harm or loss life," he said.

The CS assured that his Ministry is committed to support efforts towards the well-being of Kenyans as they deliver services to embrace safety messages and curb occurrence of accidents or incidents related to energy use.

Chirchir noted that according to the Central Bank of Kenya report, the country has experienced a 7.5 percent expansion in Gross Domestic Product (GDP) and a 12.9 percent increase in nominal GDP in 2021 and the resumption of the economic activities has contributed to recovery trend from energy sector to service the demand for reliable and sustainable energy by all sectors of the economy.

"This increase in consumption confirms the necessity for energy in the running of our economy and is crucial for consumer's growth as they uptake in all energy sub-sectors that can be traced back to the activity and consumption patterns of Kenya," he added.

Chirchir further reiterated that the bottom line of energy generation, exploration, transportation and policies is the consumer and therefore all stakeholders in the energy sector should protect and invest in the welfare of the consumer.

"The government's energy policy is people-centered while focus on the consumer is the priority on how we handle the energy ecosystem and for this reason our emphasis on climate change remains critical," said Chirchir.

Energy and Petroleum Regulatory Authority (EPRA) Director General Mr. Daniel Kiptoo Bargoria said that everyone has a responsibility in observing the necessary precautions to avert future accidents in the energy sector.

"In 2009, Kenya experienced the worst oil tanker tragedy along the Nakuru-Eldoret Highway at the Sachangwan area, where the tanker busted into flames and left more than 100 people dead and some injured," said Bargoria.

He further added that prevention is better than cure and is very important to adhere to safety measures while handling petroleum products and electrical equipment.

The *Kaa Safe Mtaani* campaign aims at driving awareness and education on safety steps, when handling petroleum and electrical products.

Client: State Department for Energy Project: The distribution of clean cookstoves to Vulnerable Communities in Tana River County and public sensitization campaign on clean cooking practices.

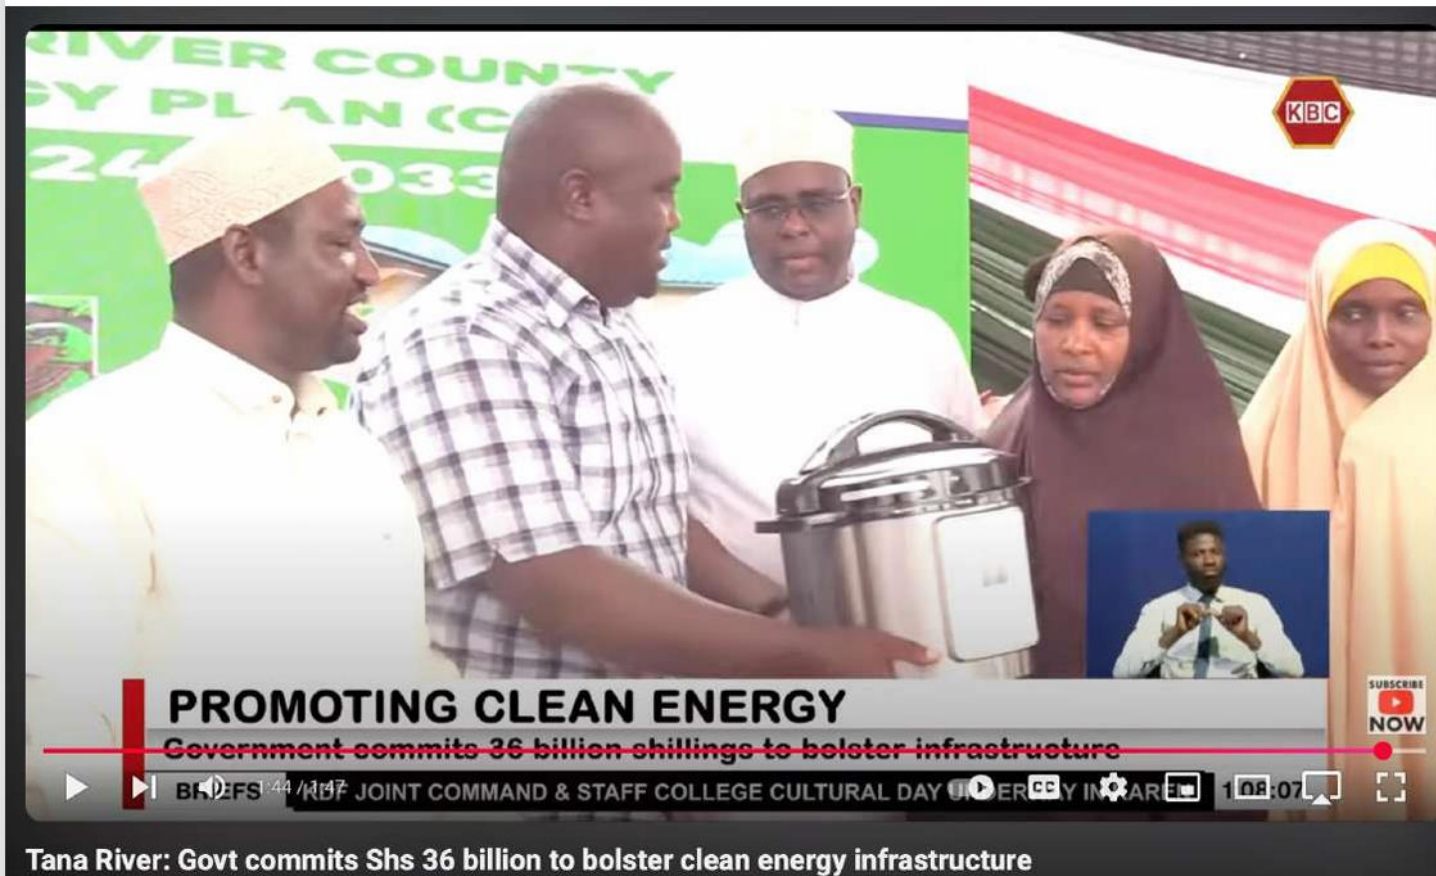

Duration: 1 month

Campaign Brief and Role: Execution of the sensitization of communities on clean energy and distribution of cook stoves in vulnerable communities in Tana River County.

Campaign objectives:

- To promote county level action in advancing energy policy
- To develop clean energy systems in counties
- To empower communities, and transform lives

Client: Office of the First Lady- State House Project: Beyond Zero Campaign

Duration: 3 years

Campaign Brief and Role: Conceptualization and execution of the Beyond Zero Campaign, seeking to enhance public awareness of mother-child deaths in Kenya during childbirth.

Impact: This campaign enhanced more visibility in the topic, leading to one of Kenya's most successful campaign, attracting investments and contributions towards the health sector in the country.

Campaign Objectives:

- To increase access to dignified health for all Kenyans, particularly mothers and children
- To reduce preventable deaths of mothers and children during childbirth
- To reduce transmission of HIV infections from mother to child during childbirth

Africa Must Address Barriers Hindering Youth Entrepreneurship – President Ruto

By PCS
Published on: December 09, 2023 03:26 (EAT)

African governments should create a conducive environment for entrepreneurship to expand opportunities for the youth.

President William Ruto said the governments should strive to provide young people with access to capital, mentorship and opportunities.

This, he explained, will enable youth to transform their ideas into thriving cross-border businesses.

"This can be achieved by simplifying business regulations, facilitating access to finance and promoting regional economic integration," he said.

The President said Kenya is leading from the front having set up the Hustler Fund that has enhanced access to affordable credit in the country.

"The Hustler Fund has enabled more than 21.7 million Kenyans access resources to establish and progress their enterprises especially those at the lowest echelons of the socio-economic ladder," he said.

ENHANCING WATER AND SANITATION ACCESS IN NAIROBI.

By Poshia Musesya, Communications Consultant (NaRSIP II).

- An urban sewerage and sanitation project in Kenya's capital city has helped over 112,000 households to have access to sewerage connections.
- Over 5,000 households in Nairobi's informal settlements have gained access to improved water and sanitation services.
- The Nairobi Rivers Basin Rehabilitation and Restoration Program: Sewerage Improvement Project (NaRSIP II), deals with the complete sanitation value chain, from treatment and reuse, and onsite sanitation, including cleaning up of rivers in Nairobi. This has contributed to an enhanced health, social wellbeing and environmental sustainability for residents of Nairobi.

Two years ago, Lena Kariuki, a teacher by profession, was posted to Kwa Njenga Primary School in Eastlands, situated in one of Nairobi's informal settlements. She recalls how the sanitation and sewerage issues at the school were dire, lacking basic amenities to serve the population of about two thousand students, teachers and non-teaching staff.

"The school had a lot of challenges when I joined, including lack of ablution blocks, flooding because of the type of soil, and no connection to a sewer line. This posed a great health challenge to the students, teachers and non-teaching staff as well as the environment due to unsafe handling of waste," she says.

The rainy season was particularly unbearable for the school, due to the water clogging up the soil and flooding from other areas, turning the schoolyard into a large, filled pond.

"The school was because of this. We also had an extended holiday period as we waited for the waters to subside. Before the new ablution blocks were constructed, sanitation in the school was a big challenge. The male and female teachers and

non-teaching staff had only one toilet to share, while the students had to contend with sharing limited number of toilets, which posed a health issue mainly for menstruating teenagers," she explains.

These sanitation facilities are part of 50 similar ablution blocks that have been rehabilitated and constructed in Nairobi's informal settlements with the support of the Government of Kenya and African Development Bank Group (AfDB) under phase II of the NaRSIP program. The NaRSIP II program is part of the larger Nairobi Rivers Basin Rehabilitation and Restoration Program (NaRSIP) which aims to enhance sustainable management of the Nairobi Rivers that support natural ecosystems regeneration, socio-economic activities and improved livelihoods. Implemented by the Athi Water Works Development Agency (AWWDA), NaRSIP II program forms part of Kenya's agenda to provide safe and sanitation for all Kenyans. According to the Kenyan Constitution, enshrined under Article 43, every Kenyan has a right to a clean and healthy environment, which includes the right to have the environment protected for the benefit of present and future generations through legislation and other measures like infrastructure development.

The ablution blocks will enhance access to sanitation and dignity for over two thousand students, teachers and non-teaching staff in the school. Photo: Athi Water Works Development Agency.

The scope of NaRSIP II program is extensive, and includes the rehabilitation of wastewater management infrastructure, sanitation facilities in schools, health centres and community centers for the public. The facilities will cater for diverse needs, particularly focusing on the

differently abled, and menstruating girls and youth in schools and informal settlements within Nairobi. In turn, this will positively impact the attendance of girls in schools and significantly reduce period shame while enhancing hygiene standards for them.

Access to clean water and sanitation services is a right for every Kenyan according to the Bill of Rights of the Kenyan Constitution. Photo: Athi Water Works Development Agency.

The first phase of the NaRSIP program was successfully implemented between 2010-2017, improving access to sewerage services in Nairobi from 40% to 48%. The second phase of the project is currently under implementation, is targeting to further enhance access to improved sewerage services from 48% to 55% for Nairobi residents, while also reducing pollution and improving water quality for Nairobi Rivers. The expected completion of the project is December 2025.

"During the initial phase of NaRSIP the Government of Kenya with the support of the African Development

Bank, through Athi Water Works Development Agency as the implementation agency, constructed 56km of trunk sewers, 40 km of reticulation sewers, expanded Dandora waste water treatment plant by 40,000 cubic meters per day, rehabilitated Kariobangi waste water treatment plant to restore capacity from 11,000 cubic meters per day to 32,000 cubic meters per day, constructed 50 ablution blocks within various informal settlements in Nairobi carried out tree planting along the sewer wayleaves," explained Eng. Joseph Kamau, CEO, Athi Water Works Development Agency.

HOMA BAY. STATE EYES SUGARCANE FOR ENERGY

■ The government plans to promote sugarcane and cassava as key sources of bioenergy to support renewable energy goals. By 2028, the aim is access to clean cooking and renewable electricity supply by 2030. The Kenyan Ethanol Cooking Fuel Master Plan highlights potential for sugarcane and cassava to expand bioethanol production. Engineer Isaac Kiva, secretary of Renewable Energy, emphasized these crops' roles in revitalizing cogeneration and bioethanol for a greener future. [Olivia Odhiambo]

BIOENERGY

Sugarcane, cassava set to boost Kenya's clean energy

Bagasse is used in cogeneration to produce both electricity and heat

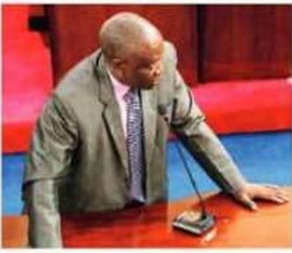

Kenya is making significant strides towards achieving its ambitious renewable energy goals, with sugarcane and cassava emerging as key players in the country's bioenergy revolution. The government has recognised the potential of these two agricultural sectors to contribute to the renewable energy landscape. Particular focus is on cogeneration from sugarcane bagasse and bioethanol production from both sugarcane and cassava. Isaac Kiva, Secretary of Renewable Energy, said the potential for cogeneration from sugarcane bagasse is one of the promising developments in Kenya's renewable energy sector.

"By tapping into the energy potential of agricultural resources like sugarcane and cassava, we can significantly reduce our carbon footprint, improve energy security and contribute to the achievement of Universal access to clean cooking by 2028 and a 100 per cent renewable energy by 2030," Kiva said. "Cogeneration and bioethanol production are crucial to advancing Kenya's renewable energy agenda." The engineer explained that Kenya can generate an estimated 193 MW from sugarcane bagasse, with the possibility of expanding to 300 MW by tapping into underutilised capacity in other sugar factories. Bagasse, a byproduct of sugarcane processing, is used in cogeneration to produce both electricity and heat. The combined crushing capacity of sugar factories is approximately 32,900 tonnes of cane per year and

with the increased focus on cogeneration and bioethanol, these by-products can play a central role. This also helps sugar mills reduce waste and lower their carbon footprint. In addition to cogeneration, molasses, another byproduct of sugarcane, has potential for bioethanol production. Bioethanol is mostly used for industrial purposes, including table sugar production, but there is a growing potential to expand its use as clean cooking fuel. The government's push to revitalise the sugar industry and encourage bioethanol production is part of a larger strategy to transform agriculture into a powerful economic engine, Kiva said. Cassava residue including peels, stems and leaves can also be used for secondary bioethanol production.

INVESTMENT OPPORTUNITIES

Kisumu to host fourth edition of intra-Africa trade conference

Bukhayo North-Garduyi MCA, Gambia Jakaa FILE

FAITH MATETE/Kisumu county is set to host the fourth Africa Export-Import Bank Investment Conference from November 25 to 27. Afreximbank said the event will bring together leaders across Africa, including heads of state, governors, mayors, legislators, policymakers, financial institutions and key stakeholders. Its focus is enhancing intra-Africa trade, regional integration and sustainable economic development. This year's edition of the African Sub-Sovereign Governments

Network event will serve as a platform for advancing intra-African trade, investment and regional economic integration under the framework of the African Continental Free Trade Area. The conference will also be used to expand educational and cultural exchanges. President William Ruto is expected to attend. Other leaders include Kisumu Governor Anyang' Nyong'o, Afreximbank's president and chairman of the Board of Directors, Benedict Oramah and Jean Pierre Mbaesi, secretary general, United Cities and Local Governments of Africa.

Trade and Industry CS Salim Murya and governors Gideon Mwangi of Kilifi and James Orenge of Siaya are expected. Organised around the theme 'Leveraging the AfCFTA for Sustainable Trade and Investment, A Development Pathway for African Sub-Sovereigns', the summit seeks to act as a vehicle for promoting investment and industrialisation at the sub-sovereign level. Nyong'o said the conference will allow government, development banks, trade institutions and development partners to meet and address

REPORTED ON THE MURUGA PUBLIC SECURITY INCIDENT. Odhiambo will undergo a mental assessment test, as investigating officers were also granted an opportunity to conduct a forensic examination on his two mobile phones. Police said Odhiambo played a significant role in the events preceding the tragic incident. The suspect told police he was paid Sh9,000 for his work. He is alleged to have provided transport for Victor Ouma, also known as Sisco, to the location where Ayieko was abducted, investigators have shown. Ouma, who is in police custody, has been linked to the crime alongside his deceased brother, Robert Waleho, as well as other individuals who are yet to be identified. Ouma, who was arrested in Nairobi's Dandora estate, was presented at the Siaya Law Courts on October 30. Investigators were granted 21 days to detain the suspect as part of their probe. Odhiambo told police he picked Ouma from Kisumu and took him to Gem, where Ayieko was being held by Waleho and other suspects. Ouma later walked out of the room with a Samsung mobile phone believed to belong to Ayieko. They made trips to and from various M-pesa dealers and banks for withdrawals. Ouma was wearing a blue jacket at the time of the incident, Odhiambo told police. The same jacket was captured on CCTV footage captured at the withdrawal areas. The DCI is actively pursuing several leads to ascertain the full circumstances surrounding the murder. Detectives who had been profiling Waleho linked the 34-year-old to a series of violent attacks. Waleho was shot dead in a security operation and a pistol recovered.

Water agency aims to implement Sh140b plan

- Seven water projects lined up in Kiambu and Murang'a counties
- Agency to source more funds through private partnership programmes.

GITAU WANYOIKE, MURANG'A

In efforts to improve water supply while addressing perennial shortages in Murang'a, Kiambu and Nairobi counties, the Athi Water Works Development Agency (AWWDA) has embarked on ambitious multi-billion shilling dam projects. The projects aim to ensure steady and reliable water supply to residents of the three counties. The water agency is planning to implement seven water projects in Kiambu and Murang'a counties at an estimated cost of over Sh140 billion. In Murang'a, AWWDA is constructing phase II of the Northern Collector tunnel at a cost of Sh12 billion while Maragua 4 dam is estimated to cost Sh35 billion. In neighbouring Kiambu, five dams have been lined up for construction in order to meet the county's pressing water demand. The dams are Ndarugu II, Kamiti, Thirika, Bairo II and Gatamayu whose estimated cost is Sh73 billion. To finance the projects, the agency is planning to source the funds from mixed financing and through private partnership programmes. For a long time, residents in the two counties have cried foul that despite providing water to Nairobi, they are left struggling to access clean and sufficient water for domestic use.

Maragua 4 dam is billed to be the biggest in the region, rivaling Thika dam popularly known as Ndakaini located in Gatanga constituency. The proposed dam is meant to provide water to the residents of Gatundu, Juja and Thika who were not included in the Karatina II dam supply plan. The mega dam was launched by former President Uhuru Kenyatta a few days to the 2022 General Election. In March, last year, AWWDA officials and consultants were chased away by residents of Gati, Mvima, Kanjuku, Watathi and Gathaiti during an abortive meeting to explain the scope of work and affected areas. Project challenged The locals from the villages where the dam is set to be built later moved to Thika Environment and Lands Court seeking its implementation halted. In a petition, John Mwangi Karuki, James Muchai, Willy Githua, Patrick Karuki and 485 other affected land owners opposed the process to implementing construction Ndarugu II dam project. "We urge the government to consider putting up the dam in other areas to avert environmental degradation of Gatundu North that could affect our farming activities," said Ng'anga's Mutitu, a former Chania MCA. In a further bid to quench thirsty residents of Thika and Githunguri, the government has announced plans to implement the Sh21 billion water and sanitation project in Kiambu county. The project involves construction of Thika 3A dam at the confluence of River Thika and Kiama which will hold 14.6 billion litres of water.

SH73 BILLION ESTIMATED cost of constructing five dams in Kiambu County SH12 BILLION THE cost of constructing phase II of the Northern Collector tunnel in Murang'a.

Kakamega school turns to eco-friendly briquettes for meal preparation reducing smoke emissions

BY MOSES WEKESA (KNA)

A school in Kakamega has embraced the use of briquettes as its main source of fuel for preparing meals, shifting from firewood since 2018. St. Antony Secondary School Kakoi acquires the briquettes from a Malava-based supplier who produces them using sugarcane bagasse. The supplier collects the bagasse from sugar factories in Kakamega, where large amounts are generated, with the excess often being disposed of in landfills.

The school's headcook, Justus Muthami, said the briquettes are efficient and generate sufficient heat for meal preparation, similar to firewood. Muthami expressed gratitude to the school management for introducing the briquettes, which emit less smoke.

"When I was employed at St. Antony Kakoi Secondary School, we used firewood to prepare meals for students and staff. We faced many challenges in the kitchen due to the excessive smoke produced by the firewood, which became a significant concern for us," he noted.

The school's bursar, Neville Situma, said the school had been searching for eco-friendly fuel alternatives to replace firewood for many years. He mentioned that the kitchen staff had also raised concerns about the excessive smoke from firewood, especially when the supplied wood was wet and had to be used immediately. Situma noted

St. Anthony Kakoi Secondary school bursar Neville Situma (left) with cooks display briquettes made from sugarcane bagasse that the school has adopted as the main source of fuel

that the briquettes have proven effective, motivating other nearby schools interested in transitioning to eco-friendly solutions to benchmark and learn how to integrate such alternatives.

Most schools in the county still use firewood as they consider migrating to cleaner fuel sources, with the alternatives often being more expensive than the firewood currently used. Maurice Ajulu, the Principal of Mwhila Boys High School in Khwisero Sub-County, Kakamega, said the school heavily relies on firewood but is prepared to transition to cost-effective, dependable, and eco-friendly alternatives.

He mentioned that **"We have received quotations for biogas and other alternatives, which are even more expensive to install than firewood"**

a local bank had proposed financing the transition to Liquefied Petroleum Gas (LPG), but he found it too costly. The school has decided to experiment with briquettes, and if they prove effective, they will implement them and seek larger burners designed for the same.

Dr. Elizabeth Waseka, Principal of Lwanda Dudi Secondary School in Khwisero, shared similar views, stating that the school relies on firewood for cooking but faces challenges in identifying affordable alternative fuel sources due to high installation costs. She noted that the school is prepared to stop using firewood due to concerns from cooks about the excess smoke in the kitchen, which not only creates a dirty environment but also discolors the floors and walls.

"There are also other environmental effects. We know that cooking with firewood and the resulting smoke are not envi-

ronmentally friendly, but for now, that is what we have. We have received quotations for biogas and other alternatives, which are even more expensive to install than firewood. However, if there is a way to install an alternative cooking fuel, it would greatly help us," she pointed out.

In response, Powerspot Pelletizers, a factory based in Kakamega that produces pellets from sugarcane bagasse, is set to design and manufacture large Jiko cookers that utilize pellets as fuel. The Chief Executive Officer of Powerspot Pelletizers, Alfonso Acebal, said the proposed Jiko design is intended for educational institutions, including schools and colleges, as well as companies willing to shift from firewood to more energy-efficient alternatives such as pellets. He mentioned that a pilot test of the Jiko was conducted at St. Mary's Secondary School in Kabras,

The Headcook of St. Anthony Kakoi Secondary school Justus Muthami standing next to bags of briquettes at the school

Firewood ready for use at Mwhila Boys High School Kakamega. The school still relies on firewood as the main source of fuel

A kitchen at a school in Kakamega. Smoke emanating from the firewood discolors walls and floors.

proving successful.

The factory currently produces 100 tons of pellets from 200 tons of sugarcane bagasse obtained from West Kenya Sugar Factory. Acebal stated that plans are underway

to expand the factory to produce over 2,000 tons of pellets from about 4,000 tons of sugarcane bagasse to meet the demands of local customers, institutions, and industries.

Government unveils key strategies to achieve clean cooking for all Kenyans

The PS for Energy Anthony Wachira, the Chairperson for the Clean Cooking Association of Kenya Daniel Wanjohi, Kajiado Deputy Governor Martine Moshio looking at exhibitions during the 5th edition of clean cooking week in Kajiado.

BY DIANA MENETO, KNA

The Government is keen to ensure that all Kenyans have access to clean cooking solutions by the year 2028. To help achieve universal clean cooking, the State Department for Energy has launched the Kenya National Cooking Transition Strategy (2024), the Kenya National Electric Cooking Strategy (2024), and the Knowledge Management Strategy in Kajiado during the fifth edition of the Clean Cooking Week 2024 expo.

These three key strategies will drive the cooking sector by defining a roadmap for clean cooking, linking electrification and cooking policies, and streamlining data management to track progress in the cooking sector, among other benefits.

In his address during the launch in Kajiado, the Principal Secretary for the State Department for Energy, Alex Wachira, stated that clean cooking energy would be a national priority. He emphasized that it would be part of the ongoing review of the energy policy to promote the

uptake of clean cooking solutions and sustainable biomass.

"We target to have 50 per cent of the population using Liquefied Petroleum gas (LPG), 30 per cent bioethanol and 10 per cent electric cooking, three per cent biogas and seven per cent sustainable biomass by 2028," the PS said.

He remarked that to achieve this, the government needs to mobilize US\$435 million spread over five years to implement Kenya National Cooking Transition Strategy and \$57 million to implement the Kenya National Electric Cooking Strategy.

This could be in the form of Government funding, equity debt, grants, result-based financing, carbon financing and crowd funding.

"In this respect therefore, we wish to urge development partners and private sector who have an interest in clean cooking to come forward and identify opportunities for contributing to the national goal of Universal access to clean cooking. We further urge the counties to actively engage in resource mobilization with a view to

successful implementation of the clean cooking targets set in their county energy plans," the PS said.

"We look forward to strengthening existing partnerships and establishing new ones. Our aim is to attract investment in clean cooking so as to enable the smooth implementation of the strategies. Let us join hands to reduce the negative impacts of cooking with unsustainable forms of energy," he added.

The PS acknowledged various development partner agencies such as Doreign, Commonwealth and Development Office, UK Partnerships for Accelerating Climate Transitions, GIZ, Green Climate Fund, Energizing Development, Modern Energy Cooking Services, AFD and Loughborough.

The PS pointed out that clean cooking has major contributions to the avoidance of unsustainable wood harvests, reducing mortality associated with household air pollution and reducing the emission of greenhouse gases thereby contributing to the national climate change goals.

The KENYA WATER SANITATION AND HYGIENE (K - WASH) Program is a critical initiative that will positively impact the lives of millions of Kenyans. Effective communication is key to its success, ensuring that stakeholders are informed, engaged, and supportive.

I am confident that with my expertise, I can provide a communication strategy that will amplify the program's visibility, promote transparency, and engage stakeholders.

I look forward to the opportunity to collaborate with you to ensure the successful implementation of this vital assignment

Thank You!!!
